

TECHNOLOGY RISK MANAGEMENT: A SEMINAR

DATE: 20 MAY 2010, THURSDAY

TIME: 2.30PM TO 5.30PM

VENUE: CAPITAL TOWER, 9TH FLOOR, FTSE ROOM, 168 ROBINSON ROAD

A SYNOPSIS

The Insurance Multi-sectoral Standing Committee (IMSC) for Business Continuity Management (BCM), which is chaired by GIA, is organising the Technology Risk Management Seminar on **20 May 2010** for member companies of GIA, SIBA, SRA, and LIA.

Globally there is increasing awareness of the crucial need to protect not only company's data but also the customers' data. Governments are in fact implementing regulations, holding institutions and individuals responsible for loss of data. In Singapore, the Monetary Authority of Singapore (MAS) has taken steps to ensure proper protection of data in the Financial Services industries. Please click [here](#) for the MAS circular no. SRD TR 02/2009 dated 18 Aug 2009.

Although awareness is growing, there may not be a full appreciation of the legal implications of data loss. While the authorities push for greater protection, implementation remains a major challenge for many companies.

Protection methods need to be user-friendly and efficient, minimizing any interruption to workflow. If possible, users should not have to drastically change their way of working to comply with the new security requirements.

The speakers will cover:

- IT governance and policies in an organization.
- The legal implications when data is stolen, leaked, or lost
- Risk Technology Management
- Technologies as the solution

WHO SHOULD ATTEND?

- Principal Officers and Alternate Principal Officers
- Senior Management
- Heads of Business Departments
- IT Managers and Risk Managers

Please email to register for this seminar, providing your name, designation, and company name to Yeo Hock Yew at hockyew.yeo@gia.org.sg by **Fri 14 May 2010**. Because of limited space, applications will be on a first come first served basis.

Thank you and best wishes

Mark Lim
Executive Director
29 April 2010
